## Honoring 125 Years at CHP

Children's Hospital of Pittsburgh is celebrating its 125th anniversary this year. MDL Manufacturing and the Sarah Donley Sharing is Caring Fund are partnering to create a unique contribution in honor of this milestone.

In March 2011, Sarah Donley was battling kidney failure at Children's Hospital. Her prognosis still unknown, Donley, an Altoona native, had only one question on her mind – what could she do to help the children around her who were suffering? Thus, the Sarah Donley Sharing is Caring Fund was established.

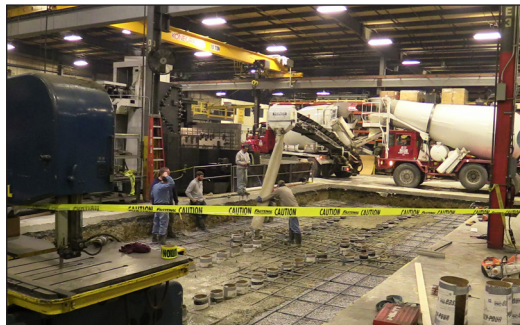

MDL Manufacturing was approached by the Sharing is Caring Fund to help raise awareness and funds to contribute to the children who are currently receiving treatment and care at Children's Hospital and their families. In order to commemorate the 125th anniversary, MDL and the Sharing is Caring Fund agreed to create a giant greeting card made out of steel.

The greeting card will be constructed at MDL and presented in the steel city to Children's Hospital during its anniversary festivities this summer. We are seeking contributions to help defray costs associated with the placement of the card [preferably concrete] so that all funds raised can go directly toward Children's Hospital. Donors and contributions will have the opportunity to have their name etched onto the inside of the card.

If you have any questions or wish to contribute, contact:

## Bridge Mill Construction Has Begun

In April the main manufacturing building will see the installation of a new 6 meter, 44,000 pound capacity Bridge Mill capable of 5-sided machining with one set-up.

As you can see from the pictures above, construction has started and the cement base has been put in place. We will be sharing updates of the installation process on our various social media pages as well as future newsletters.

Below is a computer generated image of the machine when it is completely installed. We are excited to get this machine up and running as it will help increase our capabilities and make us more efficient in the CNC Department.
